

Visionline Software Lifecycle

Vingcard Visionline is an on-premises hotel access management solution and represents a safe, seamless environment by equipping properties with the industry's highest security standards.

To keep your Visionline hotel access management running smoothly regular software updates are essential. This helps to improve reliability, access new features and increase security preventing cyber-attacks or data breaches.

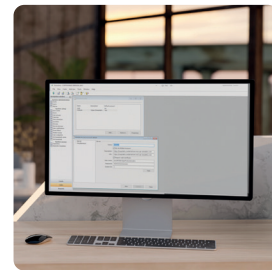

Visionline Software maintenance lifecycle approach

- Main software versions are supported for 2-years following release; during this time there will be routine updates to this software version with patch releases to fix bugs, increase reliability or improve security.
- R&D development is maintained for 2-years following the main release
- 2-years after the main release Technical Support remains available. For any bug fixes, improvements, or security enhancements, a new software version is required.

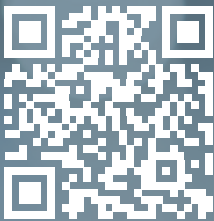

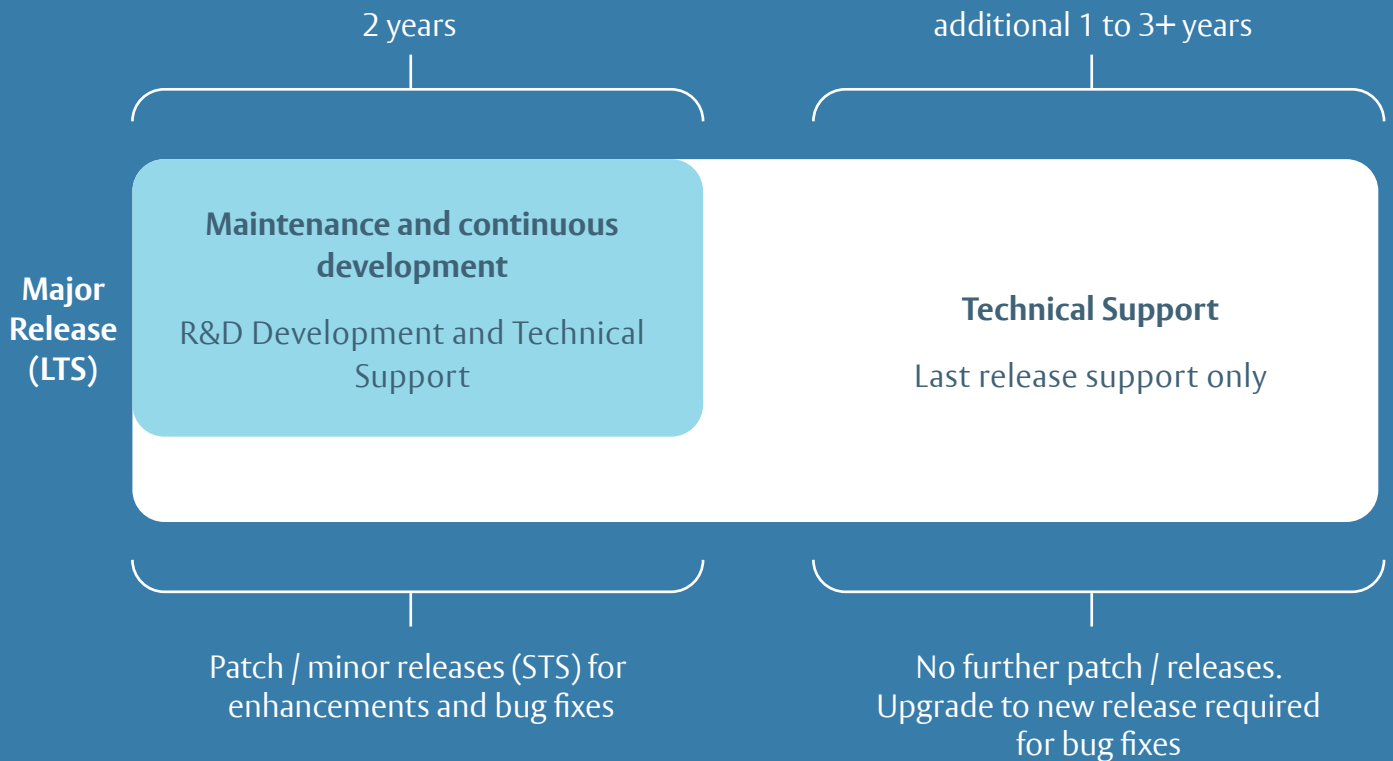

Benefits

of up-to-date software

- ⊕ Guard against cyber-attacks and data breaches
- ⊕ Improve equipment reliability and compatibility
- ⊕ Access to new features or functionality
