HID ACUITY® Linen Management Application

Linen Management software for Hotels

ACUITY® leverages the power of cloud computing, pervasive mobile devices and RFID stations to allow users to gain a rapid and simple overview of their linen stock levels, providing insight on which and how many items are where all in real time.

DESCRIPTION

ACUITY is a complete IoT, RFID-based platform enabling real-time inventory availability and visibility over all textile assets, from linen manufacturers to laundry groups — and their customers in the hospitality and healthcare industries.

ACUITY is an innovative and proven technology platform combining RFID tags, equipment, cloud software suites and services. It allows organizations to efficiently identify, track and manage linens, increase financial gains through reduced operational costs, optimize stock movements and purchases, and improve customer satisfaction.

Linen data is collected, stored, analyzed and acted upon in real-time through the RFID-enabled equipment. ACUITY® transforms the RFID data into rich, interactive dashboards and reports, providing a comprehensive overview of linen stocks by article reference or individual items, zones in your facility and customer sites. The system allows you to significantly improve linen lifecycle management, optimize washing schedules, anticipate deliveries, identify lost or misplaced items and manage cage assets as well.

ACUITY® allows Hotel managers to rapidly gain a real-time overview of their stocks to:
: Better control linen going in and out their facility
: Improve the management of their daily/monthly requirements
: Optimize labor costs
